ITA - Italian Trade Agency is the Governmental agency that helps the business development of Italian companies abroad and promotes the attraction of foreign investment in Italy. Its activities are part of the Official Mission of Italy to the United States and are supported by the Ministry of Economic Development and the Ministry of Foreign Affairs.

With a worldwide network of 79 offices in 65 countries (5 in USA), ITA provides information, assistance, consulting, promotion, and training to Italian small and medium-sized businesses to assert the excellence of Made in Italy in the world.

The Houston Office, who has organized the Italian presence at World of Concrete 2022, oversees the building equipment sector in the United States.

The Amadio & C S.p.A. is an Italian dynamic company specializing and leading in design, production and sales of shoring equipment (horizontal formwork RapiDeck, Props DIN EN1065, Shoring tower), scaffolding system, a wide range of accessories for the construction site, and on request construction and mining equipment.

Our technical department provides complete assistance on new or developing projects, as well as solutions for dynamic construction site configurations.

Please check our website www.amadio.com to see all the different equipment we manufacture.

INDUSTRIAL LIFT

BOAT LIFT

Boat Lift is the results of a decenary technical and commercial experience in the field of lifting and handling system, with a particular focus to the exigencies of all operators from nautical and marine industry.

Our corporate philosophy is to evaluate the needs of the customers in order to satisfy their requests during the project and production of our machines.

Only this modern and future-oriented imprint, with new materials, machinery and advanced technologies allow to realize a product of undisputed quality.

CSG Engineering is an engineering, consulting and software company, with significant experience in design, production, planning, automation, cost control, new precast construction systems, new factories.

The founding members started their professional career in precast companies, covering different company roles.

We propose ourselves as a reliable point of reference for those who already work and for those who want to enter in the precast business Being at their side and helping them to face all their needs.

The engineering expertise gained in several Countries, and the knowledge of production, transport and installation processes, allows CSG to realize well-optimized projects on production cycles, quality and pieces typology. The application of precast can find space in industrial, commercial, residential buildings, schools, hospitals, public buildings, agricultural, railways, stadiums, sports centers, car parks, bridges, airports, infrastructures.

DMAT

PERFORMANCE MATTERS

DMAT is a material science startup specialized in concrete. We discover, develop, and commercialize innovative solutions based on complex science and simple ingredients.

Our first product is a patent-pending durable, universal, and sustainable concrete aiming to become the new global standard for the construction industry.

Italy
T: +39 035 254042

www.icaromachinery.com

In 1979, Icaro machinery was founded in Milan as a mechanical construction workshop. Since its origins, the secret of its great success has always been found in the ability to understand the needs of the market and of the final users. From the beginning, Icaro has always distinguished itself in the sector of small and medium enterprises. This was possible thanks to its ability to expand in the international market rapidly.

Icaro's diverse customer base is made up of opposite realities worldwide; from the large construction companies on an international level, big industrial corporations, government bodies responsible for the development of infrastructures, cement plants, oil companies, to the small and medium sized enterprises operating in the civil and industrial construction field. More than 110,000 cutter and bending machines in all the five continents have been shipped to date.

Quality, creativity and an all-Italian design have made its steady growth possible. In addition to this, the specialist operators are able to assist the internationally based customers in every phase of the decision-making process, from the order to the production of the machines.

Nettuno Sistemi provides Italian-made manufacturing hot wire solutions for the foam industry (eps / xps) with a wide array of options designed to meet specific needs and preferences.

After 20 year of activity and machines installed in more than 50 countries, the CNC hotwire foam cutting systems developed by Nettuno Sistemi are worldwide appreciated for the high quality of the components, innovative and user-friendly software, heavy duty structure and efficient after sales service.

This technology is used in the construction industry for the production of architectural and decorative elements (cornices, balusters, columns, etc.), panels for external insulation wall system (EIFS), false ceilings, frames, molds, matrices, preformed swimming pools and spas, formworks, etc.

In the last years Nettuno Sistemi has introduced many innovative applications for cutting with high accuracy and efficiency, expanded / extruded polystyrene: Automatic Wire tensioner, Microprocessor to control the wire temperature, Intelligent cutting speed regulator "Clevel" (patented).

The patented software that runs the machines is developed by the team Nettuno and has limitless functionality and seamless integration with any design process to make any work flow simpler.

XSULE® is the innovative heating cream Made in Italy that completely replaces any heating system known until now. Invisible once covered, electrically powered, efficient, fast, environmentally friendly, easy to apply, ultrathin, applicable on walls, ceiling, floor, round, corners, everywhere.

It can be covered with the vast majority of products on the market, it's electrically powered (24v) and it does not need pipes, water, boiler, approvals, gas, diesel, heat pumps, radiators, etc. and it saves you a lot, even since its installation. Energy efficiency makes this system very environmentally friendly.

The energy injected into the innovative product is converted directly into heat without line losses or CO2 emissions, and it's placed directly on the wall, under the floor or ceiling, allowing a very dynamic heating performance with a fast response time, this saves time and money.

If XSULE® is powered by green electricity such as solar energy, you get a heating solution that meets tomorrow's needs at no cost. XSULE® is based on a natural material absolutely free of pollutants and harmful nano-particles.
