

FERRARI COSTRUZIONI MECCANICHE

The company specializes in the production of transplanting machines, both semi-automated and fully automated. Ferrari transplanters are suitable to farm a wide variety of vegetables including: lettuce, tomato, cabbage, celery, tobacco, sweet potato and many others. The guidelines of the company are based on innovation and continuous development of the products which are all proudly patented. Ferrari is by far the top quality brand on vegetable transplant. Some of the equipment produced at the factory are working with hydraulic, pneumatic and electronic components.
