

SGARIBOLDI SRL

Founded in 1959, Sgariboldi has been manufacturing mixer feeders since 1969. In 1987, constantly driven by innovation, it became the first company in Europe to come up with a self-propelled machine that mechanizes the entire animal feed mixing and distribution cycle on its own, the Combitre.

Today, Sgariboldi designs and manufactures technologically-advanced mixer feeders, which are highly regarded and utilized all around the world.
